

Eniac's Strategic Discounting: Balancing Growth with Brand Integrity

Data-Driven Insights to Settle the Revenue vs. Volume Debate

Presented By: Barbara Dixon, George Girke, Masha
Shahbandeh and Suthanthiradevi Seenivasan

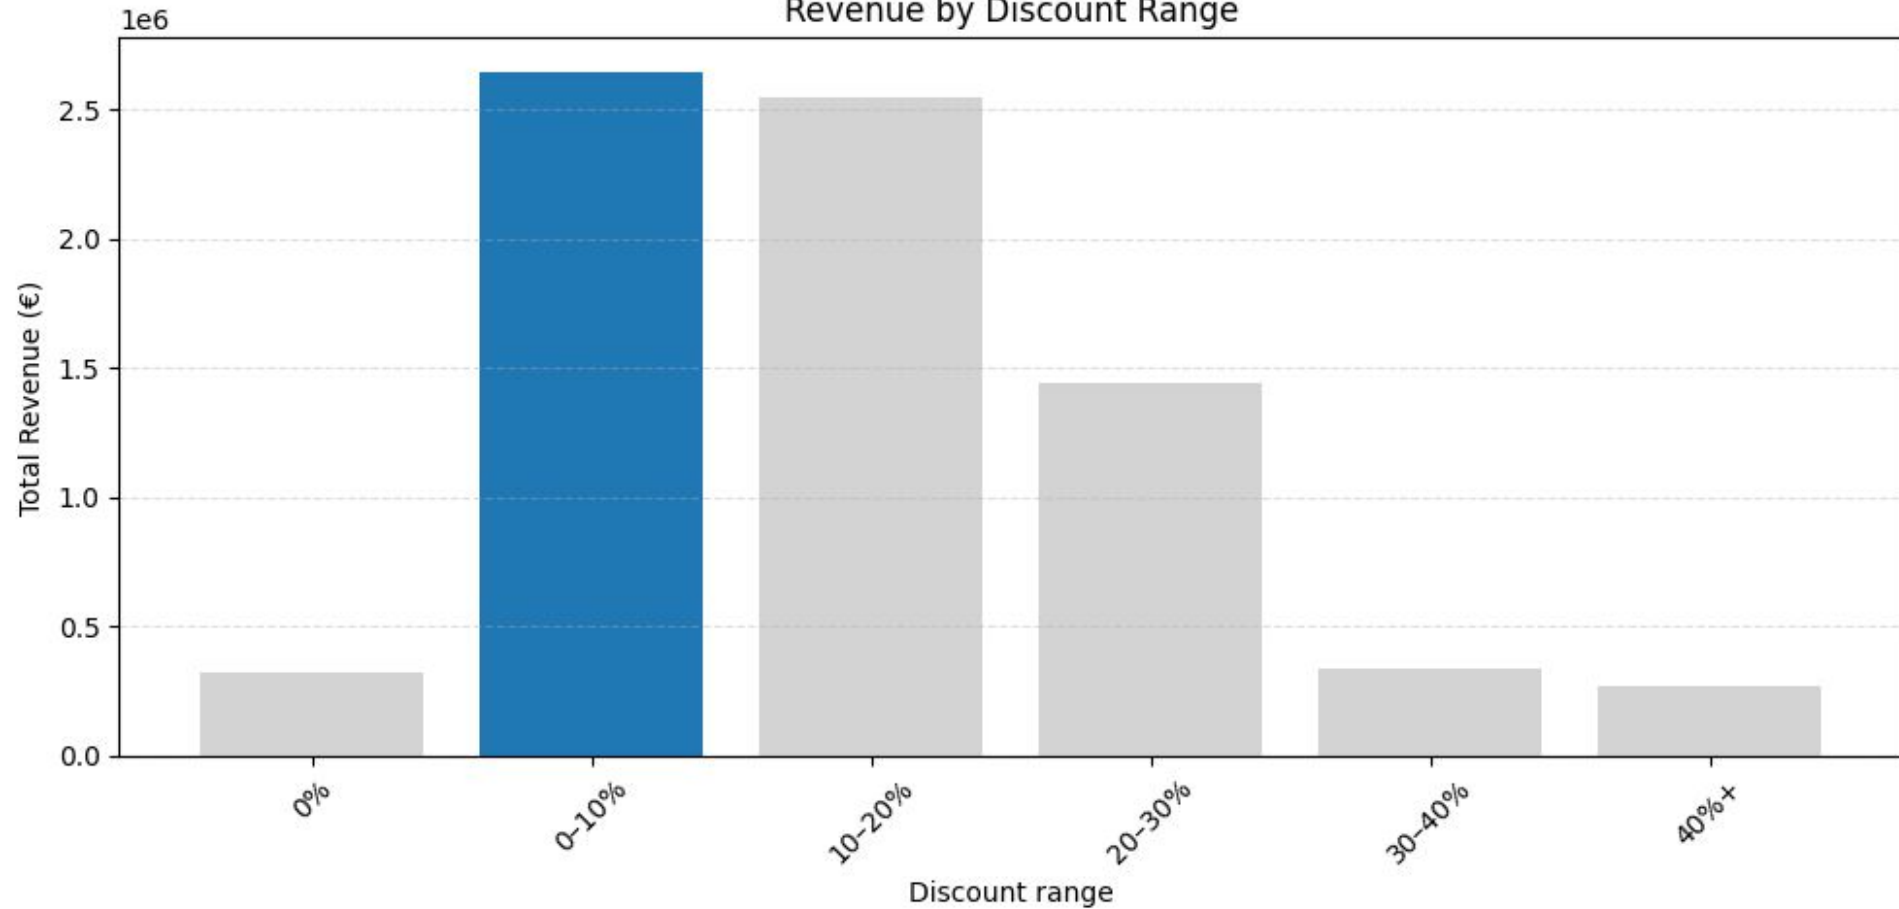

Data Integrity: From Chaos to Insight

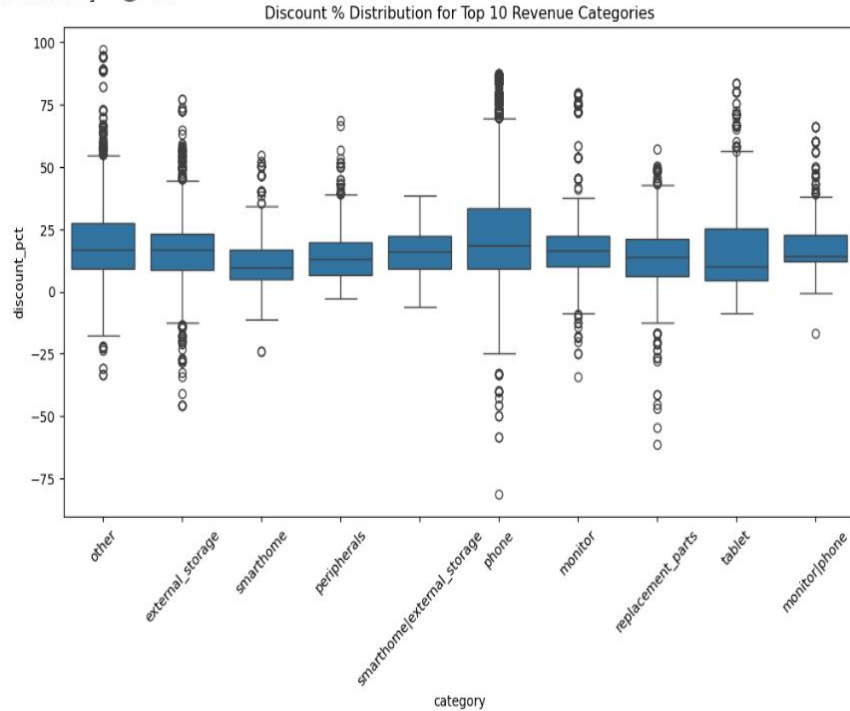

Result: A reliable "Source of Truth" for Decision Making

Higher discount does not always mean higher revenue

Revenue by Discount Range

Discount analysis for top revenue generating categories

Inconsistent pricing:

Phone, Tablets, and Others

- **Higher median** especially for phones (~20%+).
- Many **extreme discounts**

Stable and mid-range discounting:

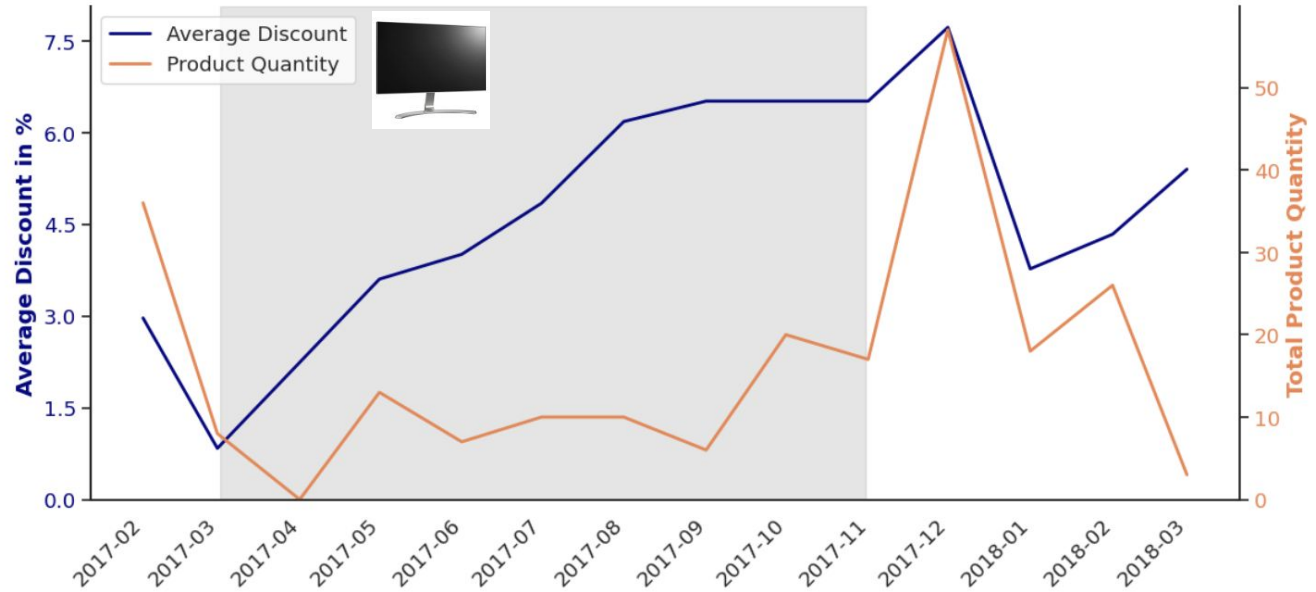

Smarthomes, and peripherals

- Fairly **consistent medians** (~10–20%).
- Some outliers, but less extreme.

Premium Products are less Price Sensitive

Premium Products (599 + Euro) make up **29%** of Revenue

Weak Correlation
between Discount and
Sales

Recommendations

1. Strategic Recommendations (The "What")

- Implement Discount Caps: Discounts at below 20%
- Premium products are less price-sensitive
- Implement other promotional offers during the seasonal sales (eg. free delivery, offered an accessory when purchasing over certain amount,...)

2. Data Collection Roadmap (The "How")

- Integrate price units in order to minimize data loss during data cleanings
- Fixed Category IDs: Replace manual text-cleaning with a standardized database table.
- Tracking the production costs would provide a better overview of an actual product profit.

THANK YOU
